

STRIKING A BALANCE

ASHRAE 189.1

The ASHRAE 189.1 standard defines new requirements for the design, construction and operation of commercial high-performance green buildings. The aim is to balance environmental responsibility, resource efficiency, occupant comfort and well being. The standard applies to both new and existing buildings and systems supporting the goal of current development without compromising the ability of future generations to meet their own needs.

The VT7000 Series Communicating Controllers with integrated (PIR) Passive Infrared motion sensor allows building owners to optimize energy savings while improving occupant comfort by reducing wasteful energy delivered to unoccupied spaces during scheduled occupancy periods.

The new wireless options open exciting new retrofit building opportunities for system integrators. Simplified automation reduces total installed costs and easier installation results in more job wins and increased revenue.

Viconics is committed to an environmentally conscious global community. The VT7000 Series assures efficient operation over the life of the building and its systems helping you strike a better overall balance.
