The New VBZS BACnet Zoning System. Simple, Scalable, Powerful!

Offering a cost effective, easy to use zoning system, in today's building market has often meant sacrificing system features for low initial cost. Traditional building automation systems which tailor to the larger building market often leave a gap filled by scaled down, featureless products that fail to deliver on performance, longer-term reliability or system scalability.

The Viconics VBZS system has been designed to bring large building automation features to the small buildings market by offering all of the "most used" functionality at a lower total cost. Furthermore, the system can be cost effectively expanded using the building owners BACnet system of choice.
