BOOTH # 1025

Offering a cost effective zoning system in today's building market has often meant sacrificing system features for low initial cost. Traditional building automation systems which tailor to the larger building market often leave a gap filled by scaled down, featureless products which fail to deliver on performance, longer-term reliability or system scalability.

The Viconics VBZS system has been designed to bring large building automation features to the small buildings market by offering all the "Most-Used" functionality while allowing for future expansion through the use of BACnet.
